

Ding is dead simple time tracking, built for freelancers & small teams

OSLO, NORWAY - OCTOBER 29, 2013

From the fjords of Norway comes Ding, a time tracking service built with small teams and freelancers in mind.

– Pretty much every time tracker we've tried are built for managers. We needed something tailored to our needs, focusing on the hours we put in and the money we make, says Gjermund Gustavsen, designer & co-founder of Ding.

The product features a responsive web interface and a native iPhone app. Ding's single purpose is time tracking, and this drives its simplicity.

– If time is what you sell, you have to log your hours somehow. Freelancers and small teams like us want to focus on the real work, not the administration of what we do. By taking the chore out of time tracking, we're ultimately making it easier to run your own company, says Gustavsen.

The launch of Ding has been kicked off with podcast sponsorships on John Gruber's The Talk Show and Accidental Tech Podcast featuring Marco Arment & John Siracusa.

Ding is proudly bootstrapped, and has no outside investors.

FEATURES:

- Slick web interface, tailored for all screen sizes
- Blazingly fast iPhone app
- Panel of statistics, showing hours worked and money made
- Powerful filtering & exporting
- Simple pricing plans: Solo and Team (both with unlimited projects)
